SEASON 1926

17th Annual Catalog
Of STRAWBERRY PLANTS

RASPBERRY PLANTS, GRAPE VINES
ASPARAGUS ROOTS, ETC.

Hall's True-to-Name Plants are Sure to Grow and
Produce Big Crops

J. KEIFFORD HALL

SMALL FRUIT SPECIALIST

REIDS GROVE, MD.

I have unsurpassed facilities for prompt and safe shipment
to all points, and I always secure the lowest rate possible.

Friends and Customers

Another year is upon us, and the time has come to present to you my 1926 catalog.

I want to take this opportunity to thank all customers and friends for their 1925 patronage and recommendations to friends and neighbors.

I surely like to read the many letters I receive during the year from different sections of the country. They give me courage, so keep them coming.

I appreciate every order whether large or small.

My crop of plants for 1926 is fine; large, thrifty and free from disease.

There is not a nurseryman or seed house in the business that is more anxious than I am for every customer to get good, true to name and free from disease stock. I want to succeed and I fully realize to succeed I must treat every customer right and make him a satisfied one.

When you buy of me you do not have to pay for display and high priced catalogs; you get your money's worth in plants of good stock and when properly planted and looked after, will produce a big crop of luscious fruit.

If you have never given me an order and you want anything in my line give me a part of your 1926 order anyway, if you do not want to give me all, then if my plants are not what I claim for them tell me.

I am hoping my friends and customers will make 1926 the banner year for me as well as for themselves.

I am,

Yours for Prosperity,

J. KEIFFORD HALL,

The Small Fruit Specialist.

P. S. I want every customer a booster for Hall's plants, etc. Let me make you one.

Please Read Carefully

All of my plants are grown on a light sandy loam, which makes the plant roots bright and long. When properly planted they will stand the drouth and continue to grow. I grow my own stock and do not dig until ordered. This makes them fresh. My plants are put in the best condition possible, by experienced hands. I claim that I send to my customers as good plants as can be procured of any nurseryman in this country, and the many testimonials that I receive is convincing evidence. Give me your order and become a yearly customer.

I do not attempt to grow all varieties that are grown. I try to grow the ones that I can honestly recommend to the public. Please do not order plants that I have not listed unless you will allow me to substitute.

MY MOTTO. Once a customer, always a customer.

PARCELS POST. My mail package is light, and yet substantial that I can deliver plants to your door in perfect shape, and don't believe there are any better plants to be obtained anywhere.

BY FREIGHT. I ship plants this way, but it is always with the understanding that it is at purchaser's risk.

PAYMENTS MUST BE MADE IN ADVANCE. but orders will be booked and held, providing a remittance is enclosed with order, and when balance is paid order will be forwarded.

C. O. D. ORDERS, will be accepted and promptly filled, but when made out for large order, a part of the money must accompany order, or satisfactory reference given.

SUBSTITUTION. It is not always possible for us to have plants of all the varieties we have listed, late in the season, but if allowed we can often substitute a better variety and thus save time, which is very important. Please indicate in order if you object to substitution. If you don't we will take it for granted that substitution is satisfactory.

REFERENCE. (By permission). Cashier Bank of Morion, Marion Station, Md., Postmaster Reids Grove, Md.

NURSERY INSPECTION. Copy of certificate attached to each shipment.

STRAWBERRIES Should be grown by every person who has a rod of ground. They can produce on almost any soil, and there is no fruit so delicious or healthful. If you had no strawberries on your table last year, don't repeat the loss this season.

HOW BEST TO REMIT. By registered letter, bank draft, check to my order, postoffice money order or express order.

SHIPPING SEASON. In fall from September 1st to January 1st. Spring from February 1st to May 10th. It frequently happens that I can furnish plants to Southern customers all through the winter, note a time when the ground is not frozen.

CUSTOMERS. Your order, when received, will be shipped as prompt as possible. I am rushed at times, but will get your order out at first opportunity; I believe in prompt shipments.

LOOK. I do not dig plants before order is received, in either spring or fall.

GUARANTEE. All plants are guaranteed to be true to name, and I will replace any plants found otherwise, but in no case will I be responsible for damage beyond first cost. Safe arrival of all plants sent by mail.

NURSERYMEN and DEALERS. Send me your Want List. If you want something that will please your customers, you need not go any further. I guarantee you a square deal.

Express shipments are not guaranteed.

SHIPMENTS BY PARCELS POST.

Plants of all kinds are now admitted to the mails as Fourth Class Matter maximum weight 70 lbs. in first zone, 50 lbs. in all other zones. I cannot give estimates on plants for some varieties are larger and weigh more than others. The best way is to let me ship your plants to you C. O. D. for the postage. I have been doing this and find that my customers are well pleased. It is much safer while the Express Companies are congested as they are. I will not guarantee anything by Express.

Packages of any considerable size will have to be shipped by express.

STOP, LOOK AND READ

Quality your first consideration. There are a great many plant dealers. Some are selling plants that have had little experience in growing or fruiting them. It is your duty to know when you place your order who you are placing it with. I for my own self would prefer one that has had experience one who knows the habits of the different varieties, and one who knows what is best for the different localities, also know that the plants are true-to-name, free from disease and well rooted.

I have spent my whole life in this business. I make it a study day in and day out. I claim to be a specialist. Every order is given my personal attention.

I do not get out an expensive catalog. I could do it. I prefer giving my customers the benefit of the extra cost that would be attached to a beautiful catalog, in quality of plants.

NO DISTANCE TOO FAR

Texas, March 19, 1923.

Mr. Hall.

Dear Sir:—I received the Missionary strawberry plants today and will say they arrived in first-class condition. I couldn't wish for better plants than they are. Several growers saw them, and were surely pleased. Anyone in want of plants, I can surely recommend you.

Thanking you for such good plants,

Very truly yours,

R. C. WILLIAMS.

STRAWBERRIES

DESCRIPTION OF VARIETIES

HORSEY

THE GREAT EARLY STRAWBERRY

HORSEY. (Perfect). After reading the description in my 1925 catalog I do not see how I could improve it, only to say I am still heading my list with this wonderful early berry, so I am using the same description. I will not take back one thing I have said about it. It has been tested over a wide area and found, in many instances, better than I had claimed for it.

IT is Known as **The Best Extra Early Frost-proof Berry**. The reason for this is that in 1920 and 1921 when practically all early varieties were killed by the late frosts Horsey stood the test and produced from 90 to 95 per cent of a crop of perfect berries; not seedy ends, coxcombed and one sided. Shape oblong, taper but not real sharp. When packed they are beauties. Firm and will ship anywhere. It is earlier than Premier. The fruit brings highest market price. Plants very large, strong, healthy growers, entirely free from any disease. Color a deep red that runs all through the berry; sour. The calyx is large and dark green which adds to its beauty.

It is a good plant maker when planted early. It is unlike most varieties in that it does its growing in the hot summer months, when fall begins to come on it begins to take root early which insures a deep massive root system which is so much needed to produce its heavy crop. It is a very strong bisexual variety and will make a good pollinizer for imperfect varieties.

If you have tested Premier you know it is a heavy cropper. I claim the Horsey will produce as many quarts per acre as Premier. Some of my customers claim it will produce more. The premier ripens over a long period where the Horsey ripens its crop quickly. It is harvested and you have your money before the market is glutted.

Plant Horsey for your early variety and be the early bird

EATON. (Perfect). It is said to be away ahead of the newer varieties. It is a vigorous grower, very productive, a great plant maker, berries of large size, beautiful rich clear through. When picked the berries show up well. I feel it is worth a trial. My plants are fine.

COOPER. (Perfect). The most talked about and advertised new berry I know. I have never fruited it. Plants are very large and free from disease. Have heard very favorable reports about this berry. Give it a trial.

Dear Sir:

Crapo, Md., January 9, 1925.

I have fruited the Horsey strawberry plants that I bought of you two years ago and I find them fine. Last season (1924) from my two year old Horsey plants I picked berries at the rate of more than 10,000 quarts to the acre. The berries were as fine as the ones from my new bed. The Horsey is the firmest berry I know of. It is a heavy producer of large, beautiful berries that have a fine flavor. The plants are large, strong and vigorous growers, making nice beds of healthy plants. It will stand dry, cold and wet weather better than any strawberry I ever saw. They grow well on any kind of soil, light or heavy. The berries will stay on the vines after ripe without getting soft longer than any berry I ever saw. Wet weather does not seem to soften them. The Horsey will produce 10,000 quarts or more per acre of fine berries. While I was selling my Horsey berries last season on the Baltimore market at 12 and 14 cents per quart my neighbors were selling other varieties at 8 and 9 cents per quart. The Horsey is a money maker. I also wish to say something in reference to the 10,000 asparagus roots that I bought of you last spring. They did fine and I have a perfect stand. Most of my crowns put up from twelve to twenty stalks that were four to five feet high. People who have seen my patch say it is a fine one. I have always received standard plants from you, and I do not think anyone can go wrong in buying your plants. I am

Yours respectfully,

Olie L. Foxwell.

THE BEST. It surely has the right name, if I know anything about a late berry. It is the Best I have tested. With me last season, I saved only a few plants for testing; the fruit was large, firm, large double-cap, which when packed, was beautiful. It was later than Lupton with me, heavier cropper than Lupton or Gandy. It is a good grower of large plants, deep-rooted, resembles Gandy, but far better. I certainly like it and advise planting it as soon as as you can get the plants. I am limited myself, on plants. If you want any, you had better order early or else write me before ordering.

LUPTON. (Perfect) Hails from New Jersey. It is a great favorite as a late berry, very large, as firm as Klondyke, more productive than Gandy or Chesapeake. In plant growth and vigor, it is as good as the best. I have fruited it two seasons and I can recommend it to all customers. The fruit is large, round, with large double green cap, which makes it very showy and brings the highest price in market. If you want a late berry, plant Lupton.

PREMIER. (Perfect) Early, begins to ripen with Klondyke. It is very large and remains large through a long season. It is very common to hear of Premier producing 250 to 300 bushels per acre of berries of the finest quality. The foliage is light green, a good plant maker, a flavor delicious. If you are looking for something for a garden to last over a long season, plant Premier. It is firm, but does not seem to carry well under refrigeration.

BRANDYWINE. (Perfect) Late. Fruit extra large and very firm. Has unequalled shipping qualities. It is standard variety the country over. Very productive.

NORWOOD. (Perfect) Mid-season. One of the very largest strawberries grown. Fruit bright red, of good quality. Does not do well south of Pennsylvania.

KLONDYKE (Perfect) Medium early. Fruit extra large and very firm. One of the leading early varieties here at Selbyville, Del., the largest strawberry center in the world.

SHARPLESS. An old and well known berry, especially desirable in home gardens. Fruit large and of excellent quality.

JOE JOHNSON, BIG JOE. (Perfect) Late. Ripens with Chesapeake. Fruit is firm and of large size, has a good flavor, no green tips, wonderfully productive; plants are strong growers, thrives on any soil that will produce strawberries. If you are not growing Joe Johnson, plant heavily of them this spring. You will not regret it.

WARFIELD. Berries glossy, dark red, rich, exceedingly juicy; very firm. Popular canning variety and a superior shipper.

MISSIONARY. (Perfect) Early. For the early market this variety is known as Queen, while Klondyke is King for the South. Both varieties are now being extensively planted all over the country. Fruit is large, firm, and beautifully shaped. Very productive.

EXCELSIOR. (Perfect) Extra early. One of the first to ripen. An old standard variety suitable to all sections of the country where strawberries can be grown.

NICK OHMER. (Perfect) Ripens between Parsons' Beauty and Gandy, just at the time late berries are much sought for. An old standard variety. Fruit is very large and firm, a general favorite in any locality.

MASCOT. (Perfect) Late. Begins ripening about three days after Gandy first begins ripening. Fruit is very fine, and as large as any we know of. We have extensively planted this variety for fruiting purposes. It is a good one and has come to stay. Bears his crop of big, firm, red berries. Extensively planted in all strawberry sections of the country.

NEW YORK. (Perfect) Mid-season. A popular mid-season variety. Plants are large and healthy. Fruit very large and ordinary firm. Noted for producing extra crops on very poor soils. Extensively planted all over the northern half of the United States.

PRIDE OF MICHIGAN. Same as New York.

HUNDRED DOLLAR. Same as New York.

McKINLEY. Same as New York.

UNCLE JIM. Same as New York.

OSWEGO. Same as New York.

RYCKMAN. Same as New York.

CLIMAX (Perfect) Early. A very heavy yielder of very large, round berries, firm and a good shipper.

WM. BELT. (Perfect) Mid-season. Fruit is very large and firm, of a delicate flavor. Succeeds on a great variety of soils. A very good one.

SAMPLE (Imperfect) Medium late. Extensively planted throughout the North, Middle and Western States. Very productive of large well made berries, firm for long distance shipping. A standard variety.

PARSON'S BEAUTY (Perfect.) Mid-season. A very strong pollinizer. Fruit is very large, firm enough for long distance shipping. A good all-around berry. Extensively planted all over the country.

SUCCESS. (Perfect) Mid-season. One of the best mid-season varieties. Makes wonderful yields on any soil that will produce strawberries of any kind. Fruit is large to extra large, bright scarlet color; flavor is mild, sweet and rich; ordinary firm.

MARSHALL. (Perfect) Mid-season. A good plant maker of choice, strong, well-rooted plants; fruit large to very large, colored through and through, flavor as fine as one could wish; very firm and a good shipper. A standard variety.

AROMA. (Perfect) Late. Planted in all sections of the country, especially in the Middle West and Southern States. Fruit is very large, but not of the largest. Quality unsurpassed. Very productive.

EARLY OZARK. (Perfect) Extra early. The best early variety for the Northern half of the country. It is enormously productive of berries larger than Klondyke, of the Excelsior type, but twice as large and very firm. Plants are big and strong. A very good variety.

HAVERLAND. (Imperfect) Mid-season. Fruit very large and conical; plants strong growers. An old standard variety that has been tested for over a generation and is just as good today as it ever was.

TENNESSEE PROLIFIC. (Perfect) Mid-season. A well-known standard variety. Like Parsons' Beauty, succeeds over a great extent of the country. Fruit is large, bright red, ordinary firm. Very productive.

MICHAEL'S EARLY. (Perfect) Extra bright scarlet, conical—an old and popular variety and an excellent table berry of good flavor. Those who have a garden and want a few for eating purposes will do well to try it.

KLONDYKE. (Perfect) Of Southern origin. Production firm. Brilliant colored and famous on all markets as a re-shipper. Great plant maker. All commercial growers should plant it.

LADY CORNEILLE. (Perfect) Early. Fruit is large and well shaped, firm and a good shipper. Plants free from disease. Extensively planted in the South.

HOWARD 17. (Perfect) I have fruited this variety and I cannot see any difference in any way from Premier. So if you have Premier, leave off Howard 17.

BUBACH. (Imperfect) Mid-season. An old standard variety well known the country over. Fruit extra large, bright red; foliage very strong, of dark green color. Very productive.

SENATOR DUNLAP. (Perfect) Early Mid-season. A reliable market berry. One that succeeds in all parts of the country. Very productive. Fruit is medium to large, very firm and attractive. Always sells for top prices.

WOLVERTON. (Perfect) Have fruited Wolverton for several years and find it to be much in demand. Is a good plant maker and produces an abundance of fine large berries. Suited to all soils that will grow strawberries and does much better on high, light soil than a great many other varieties. Long ripen season from early to mid-season. Fine shipping qualities, also excellent table fruit. Try it.

GLEN MARY. (Perfect) Mid-season. Like Klondyke, a perfect flowering variety but not suited to plant with imperfect flowering sorts, as it only furnishes enough pollen for its own use. A standard variety throughout the North half of the country. Fruit is extra large, firm. Always brings top prices.

KELLOGG'S PRIZE. (Imp.) This new variety, introduced by Mr. Kellogg, of Michigan, seems to be just what we have been looking for, for a long time—that is, a good, imperfect variety. It has more good qualities than nine-tenths of the varieties that I have fruited. Good size, solid, heavy cropper, and a strong grower. I should judge that a field of this variety, fertilized with Joe Johnson, or Chesapeake, would be about the best of anything in strawberries. Be sure to try this one.

DR. BURRELL. (Perfect) This berry was originated by Dr. Burrell, who originated the Senator Dunlap, which has been worth millions to berry growers. He says it is a scientific cross of Senator Dunlap and Crescent. In plant growth it is a marvel. Its foliage is large and of a beautiful dark green. In the production of fruit it surpasses either of its parents. Its berries are large and beautifully formed. Color a deep glossy red, a trifle lighter than Dunlap. The meat is solid and rich, the berries are excellent shippers, and splendid keepers. The calyx is a bright green, seeds yellow. This is a strong bi-sexual variety and has a long blooming season, making it unequalled for a pollenizer for pistillate varieties.

Newport, Pa., November 24, 1925.

Mr. J. K. Hall.

Dear Sir:—The plants purchased of you last spring arrived as usual in fine condition, and have made fine growth. I expect to order more of you next spring if everything goes good. I certainly am not afraid to recommend your plants.

Please send me catalog when issued.

Yours respectfully,

JOSEPH P. JONES

New Jersey, December 5, 1923.

Mr. Hall.

Dear Sir:—The strawberry plants purchased of you last spring arrived in very good condition and have made a good growth. I do not think anyone could ship better plants than the ones you shipped me. I shall want more next spring.

Yours,

M. BONNELL.

Fall or Everbearing Strawberries

A great many people think that the Fall or Everbearing Strawberries is a fake. If you were to happen here in September, October and even the first part of November, you would not say it is a fake.

You can get these plants in early spring and have fruit from them from August until the ground freezes. I mean to say lots of it, the same year. Every garden should have some of them in it. Don't forget to include some Fall Bearing in your order. You will be more than pleased. Wouldn't it be nice to have strawberries all summer and fall.

PROGRESSIVE. (Perfect) A genuine fall bearing. This is, without a doubt, the best one; plants of good size, deep rooted and makes as many plants as most of the standard varieties. The fruit is of medium size, dark red and the flavor is unsurpassed. To obtain best results, keep blossoms off until August 1st, then when they begin to ripen you will have something you will be proud of. The runners from the young plants bear a nice lot of fruit. Be sure and order some of these plants.

1017 MINNESOTA. Is truly a fall-bearer, very heavy cropper, fruit large and flavor delicious, in plant growth it ranks with the Senator Dunlap, plants very large; foliage dark green and tall, the leaves are very large. I have never seen as many good berries of the fall-bearing varieties and of as large size as I saw of the 1017 Minnesota this past fall. You will not make any mistake in trying them. I especially urge all of my customers to get a few of them anyway.

Dear Sir:

Port Treverton, Pa., January 4, 1925.

In reply to your inquiry as to how I liked the Horsey strawberry I wish to say that I only had it one season to see how I liked it. The fruit I liked, above it was the plant growth. During the summer of 1923 it made a vigorous growth of big, strong plants. I had several early varieties planted along side and among them some of the so called best. It showed up like a giant among the dwarfs and during the fruiting season to be a good early commercial variety. A little solid for home use. Fruit firm, large size and good quality and it filled the baskets. Seeing is believing. I shall plant more.

Very truly yours.

Allen S. Sechrist.

Dear Sir:

Tampa, Florida, February 18, 1925.

I received my strawberry plants in good condition. They are doing fine. Will recommend them to all who want plants.

Yours truly,

J. W. Graves.

Grape Vines

	Each	10	100	1000
CONCORD (Black) 1 yr.....	.20	\$1.25	\$ 8.50	\$62.50
MOORE'S EARLY (Black) 1 yr.....	.20	1.75	12.00	87.00
CONCORD (Black) 2 yrs.....	.40	2.50	15.00	75.00
MOORE'S EARLY (Black)40	3.00	17.00	125.00

Asparagus Roots

When planting Asparagus roots, set four to six inches deep, and about 12 inches apart in the row, covering with only three inches of soil at first and filling the trenches as the plants grow.

PALMETTO. Of Southern origin; a variety of excellent quality; hardy, very large. All who have used it pronounce it very fine.

MARTHA WASHINGTON. This new Asparagus was sent out by the Department of Agriculture at Washington, as superior to all other varieties, on account of its freedom from blight and other diseases. It is claimed to be larger and more productive, than other kinds, and more satisfactory in every way. My plants are fine and large.

PRICES: One year, \$1.25 per 100; \$7.00 per 1000
Two year, \$1.75 per 100, \$10.00 per 1000

Prices on application for smaller or larger lots than quoted above.

Samples of one and two year old Asparagus sent upon request, of any variety.

Raspberry Plants

ST. REGIS (Red). 25 for 75c, 50 for \$1.25, 100 for \$2.25, 250 for \$5.00, 500 for \$8.00, 1000 for \$15.00.

Soy Beans

The Soy Bean is fast growing in popularity everywhere. The great value of this crop is for hay, especially as a winter feed for dairy cattle.

The drouth of 1925 cut the new crop short and if you are not careful you will get old seed that have been carried over from 1925, which have gone down in germination and vigor. My Soy Beans are fine and new crop 1925 grown. The seed I am offering I grew myself and I know what they are.

VIRGINIA. This variety is one of the best varieties for general use. It makes big yields of fine quality hay, free from coarse stems. Early, will mature hay in 105 days. My seed has been tested and inspected. Grade U. S. No. 1. \$3.50 per bushel. If wanted in large quantities ask for prices.

Giant Himalaya Berry

FRUITS FOR FOUR MONTHS

This wonderful berry which is sometimes called Grape-Vine Berry, was recently introduced from the cold regions of the Himalaya Mountains. There are several different forms of it, but this one seems to be the only one of genuine value. It grows like a grape vine, making a growth of twenty-five feet, and can be trained to a trellis of any kind.

The fruit is large, black in color, almost coreless, and unsurpassed for eating picked fresh from vines or cooked, canned or preserved in any form. Plants do well in the hot, dry sections of the South and West and are making wonderful records in the middle, Northern and Eastern States.

This is certainly a most wonderful berry because the vines do not die down after fruiting, as in the case with other berries. It is perfectly hardy everywhere, there being no winter in the United States too severe to kill it. It has stood 20 degrees below zero, with no signs of winter killing.

It is valuable for city people or anyone within limited space who desire an abundance of luscious berries. Price of strong well rooted plants: 25c each; 3 for 50c; 6 for 75c; 100 for \$8.00.

I will allow a 5 per cent. discount on all orders sent me before March 1st, when full amount of cash is sent with order for future shipment.

CUSTOMERS SHOULD PLACE ORDERS EARLY

While I have a good stock of plants of most varieties, if you wait until you need your plants you might not be able to get them, for I am liable to be sold out of the variety you want. I do know this—there is going to be a large demand for plants this spring, and if you do not place your order early you might not be able to get them. Every year I have to return many orders. I am warning you and if you send in your order late for plants and I am sold out, do not blame me. A word to the wise is sufficient. If you place your order the plants will be reserved for you.

FALL PLANTING.

I have been selling plants for fall setting for several years and my business has grown beyond expectations. I find that fall setting is growing in favor with a great many growers. Personally I think it a good thing, especially if you are growing them for "hill culture," you can set them out in September and October and get your crop next spring and you have saved a whole year of expense hoeing, cultivating and pulling out weeds and grass. On the other hand if you are growing them under the matted row system, if you set them in the fall you will have them set and out of the way when your spring work is rushing you. Besides you are sure of a good stand and when they start off in the spring they will have longer to grow, which insures a heavy matted row of strong plants ready for next years crop.

When you receive this catalog and you do not want to order in the spring, keep it and when the fall comes just drop me a postal asking me for my fall price-list, which will be sent you at once. There is one thing that I want to impress upon you—it makes no difference if you order from "HALL" spring or fall you will get what you buy and that which will be true to name and free from disease.

Do not forget that I do not issue my fall price-list before Aug. 1st. I begin to ship plants Sept. 1st., for fall planting.

Dear Sir:

Newport, Pa., January 4, 1925.

Will say that the Horsey plants that I purchased from you in the spring of 1923 did fine and produced an abundant crop of fine, large berries. We certainly were well pleased with them. I will recommend you and your High Grade Strawberry Plants to whoever may want good plants.

Yours truly,

Joseph P. Jones.

Marshfield, Vt., December 6, 1923.

Dear Sir:—The plants came in fine condition and considering the very dry season, they have done remarkably well. Did not loose but a very few. When in need of more, will know where to go.

Very truly,

H. P. DARLING.

J. KEIFFORD HALL, Reids Grove, Md.

NOTE—Early in the season we usually have in stock everything listed in this catalog but late in the season we frequently run short of some of the varieties, therefore, when you order late please state whether we shall substitute something equally as good and as near like the variety ordered as possible or return your money for any stock we may be out of. **Answer:**

Some Planting Suggestions

All varieties of the Strawberry give the greatest yield and the largest berries when grown in rich soil; hence no pains should be spared in preparing the bed carefully before planting, by digging or plowing deeply and turning under a liberal application of well-rotted manure. Pulverize the surface soil thoroughly with harrow and rake, and if a top-dressing of ground bone can be applied, it will be found a great benefit at fruiting time. Select a location where the soil is moist and deep if possible—moist and yet where water does not stand near or upon the surface. In such a soil well-enriched, Strawberries delight and give marvelous results. They will, however, succeed upon any soil if well manured. Strawberries do not succeed when planted in shady locations; hence in selecting a plot for them be careful to avoid places that are shaded by trees.

For hill culture in the family garden, set plants in rows two feet apart and the plants fifteen inches apart in the rows; or if to be worked by horse and cultivator, have the rows three feet, and the plants one foot apart in the row. In either case, cut off the runners as they appear. If to be grown in matted rows, plant in rows three and one-half or four feet apart and the plants fifteen inches apart in the rows, permitting the runners to set in the row so as to be about six inches apart each way. The after-culture consists in keeping the soil mellow and free from weeds by frequent hoeing and cultivation. If you live in the North, where you are subject to severe freezes, I would advise you to mulch your plants. At the approach of winter (as soon as the ground is frozen sufficiently to support the weight of horse and cart) cover the entire bed with straw or other loose light material. Light strawy manure is excellent for this purpose, and the soluble portion leaches into the soil and affords nourishment to the plants, while the fibrous portion remains upon the surface as a mulch. Evergreen branches are very useful for holding the mulch in place and are of themselves a protection. When the plants start growth in spring, rake the mulch from off the plants sufficiently to permit them to push through it, and leave it on the surface about the plants to protect the fruit and keep it clean and also keep the soil moist and cool. An application of unleached wood ashes or muriate of potash along the rows very early in spring, just before a rainfall, will be found to increase the size, beauty and flavor of the berries.

Certificate of Nursery Inspection

To Whom It May Concern:

THIS IS TO CERTIFY, that on the 12th day of August, 1925, we examined the Nursery Stock of J. Keifford Hall, growing in the nurseries at Rhodesdale, County of Dorchester, State of Maryland, in accordance with the law of Maryland, 1898, Chapter 289, Section 58, and that said nurseries and premises are apparently free, so far as can be determined by inspection, from the San Jose Scale, Peach Yellows, Pear Blight, and other dangerously injurious pests and plant diseases.

This certificate is valid after August 1st, 1926, and does not include nursery stock not grown within this State, unless such stock is previously covered by certificate and accepted by the State Entomologist and State Pathologist.

ERNEST N. CORY, State Entomologist.

C. E. TEMPLE, State Pathologist.
